Ser. No. 70

Inshore Waters Forecast to 12 miles offshore
for the period 0000 UTC Friday 03 February to 0000 UTC Saturday 04 February 2023

General Situation

A strong westerly flow covers the region, with gales at first in Scotland. A transient ridge of high pressure gradually builds through the day, easing winds and backing the flow southwesterly, associated with largely settled conditions with perhaps the odd shower or spot of rain in the north. Winds then start to strengthen from the northwest through Saturday as frontal band of rain gradually pushes southeastwards across the United Kingdom, with squally showers feeding into the northwest behind.
