

A polar projection map of the Arctic region showing isobars, isotherms, and wind vectors. The map includes latitude and longitude lines, with isobars in green and isotherms in blue. Wind vectors are shown as arrows. A legend at the bottom indicates 'H' for high pressure and '99' for low pressure.

This polar projection map of the Arctic region displays meteorological data. The map includes latitude and longitude lines. Isobars (lines of equal pressure) are shown in green, and isotherms (lines of equal temperature) are shown in blue. Wind vectors are represented by arrows. Key features include a low-pressure system (L) over the North Pole and high-pressure systems (H) over the surrounding landmasses. Numerical values for pressure and temperature are provided at various locations.
