

National Severe Weather Warning Service

Chief Forecasters Assessment

Freezing fog is likely to be most prevalent along river valleys and over lowland areas, but isolated fog patches are also possible elsewhere. Visibility will be less than 100 metres in places. The fog is expected to clear later in the morning, although a few patches may persist into the afternoon, for instance over the Somerset Levels.

The Met Office have issued a **Yellow Warning of Fog**

Valid from **06:00 on Thu, 01st Dec 2016** until **12:00 on Thu, 01st Dec 2016**

Patches of dense freezing fog will affect parts of southwest England during Thursday morning.

Due to the patchy nature of the fog and also the low angle of the sun, driving conditions may be difficult with journeys likely to take longer than usual.
