

## National Severe Weather Warning Service

### Chief Forecasters Assessment

A frontal zone is expected to edge its way steadily eastwards across the region on Thursday, drawing up warm, moist air in the process. This will lead to the risk of some large rainfall totals, although there is a little uncertainty over the timing of this system and therefore the likely amounts of rain. At present it looks as though 20-30 mm could fall quite widely, with locally as much as 60 mm on higher ground.

The Met Office have issued a **Yellow Warning of Rain**

Valid from **00:05 on Thu, 11th Oct 2012** until **23:59 on Thu, 11th Oct 2012**

Rain is expected on Thursday, heavy and persistent in places. This could lead to localised flooding with some disruption to travel.
