Daily Weather Summaries for August 2018

If you have any questions or feedback about this product or wish to obtain further data please contact the Met Office.

This document contains daily weather summaries for each day of August 2018. The Met Office National Meteorological Library and Archive holds a continuous record of daily weather summaries or daily weather reports from 1860, and these daily weather summaries form a continuation of that series.

The purpose of each summary is to provide an overview of the weather conditions across the UK on that day, with the historical emphasis mainly based on observations from surface network of weather stations, although the format has varied over the decades. While the emphasis remains on observations from the surface network, the current daily weather summaries supplement these by including satellite and rain-radar imagery to provide a more complete overview. The current format of the daily weather summaries is as follows:

1. Text summary of the main characteristics of the weather during the day, written by an operational meteorologist in the Met Office operations centre.
2. Table of daily extremes for the UK for key climate variables including temperature, rainfall, sunshine and gust speeds.
3. Overview of the synoptic situation at 00 and 12 UTC comprising: analysis charts showing the surface pressure pattern and associated weather fronts; North Atlantic and European infra-red satellite images showing cloud-cover; combined infra-red and rain-radar images of the UK; maps of wind speed and direction at 00 and 12 UTC; observations of pressure, wind speed and direction, cloud cover, air and dewpoint temperature at selected UK and European stations in data tables.
4. UK maps of key climate variables from observing stations including maximum, minimum and grass minimum temperature, rainfall, sunshine, gust speed and snow.
5. Further guidance notes

If you spot any data errors or omissions in this product please contact the Met Office.

Daily Weather Summary for Wednesday 01 August 2018

This day's summary created 08/08/2018 03:00

Summary of the UK Weather for Wednesday 01 August 2018

Persistent rain across Scotland gradually petered out as the night went on but further outbreaks continued to linger across the west, especially over higher ground. It remained cloudy across all of Scotland, Northern Ireland, northern England, Wales and the far southwest of England, whilst elsewhere skies were clear. This led to a cooler night than of late across central and southeastern England. Through the morning, outbreaks of rain continued to push northeastwards across Northern Ireland. The rain turned heavy and persistent, moving into the far northwest of Wales, the Isle of Man and later Scotland and northern England. The rain was accompanied by some fairly strong winds, particularly around Irish Sea coasts. For many parts of eastern Scotland, England and Wales it remained dry with some lengthy spells of sunshine across the southeast. Temperatures were close to average across the north and west where it was cloudier and wetter. Across many parts though, temperatures were well above average and it felt very warm in light winds.

Summary of the UK Weather for Thursday 02 August 2018

Through the early hours of Thursday, rain in the northwest slowly eased although there continued to be some rain and drizzle over west-facing hills. The cloud, rain and southwesterly winds kept it warm though with temperatures holding up across many northern and western areas. However in the south we saw much clearer skies allowing it to turn much fresher than recent nights. Through the day outbreaks of rain continued to affect northwest areas with some moderate bursts of rain setting in across Northern Ireland during the afternoon, which later spread into southwest Scotland. Much of western Wales and northwest England remained cloudy with fog over the hills giving some drizzle from time to time. Low cloud also lingered across the far southwest of England, otherwise many central, southern and eastern areas, including eastern Scotland had a fine day with plenty of sunny spells. Winds were light across most parts so temperatures were generally above average and it felt quite humid. However, across the southeast of England temperatures were significantly above average.

Summary of the UK Weather for Friday 03 August 2018

It was a fairly warm night across the UK with temperatures holding up in the mid to high teens quite widely. Northern and western areas continued to stay rather cloudy with outbreaks of light rain and drizzle affecting Scotland and parts of northern England and Wales. Further south and east skies remained clear. Rain across Northern England and the Scottish borders turned heavy and thundery during the morning, but with this rain clearing eastward late in the afternoon. Further north and west there was a mix of sunshine and showers, but with thunderstorms developing across northeastern Scotland in the afternoon. Western Wales remained rather cloudy with some patchy drizzle, but elsewhere it was mostly dry and warm with plenty of sunshine.

Summary of the UK Weather for Saturday 04 August 2018

Thicker cloud continued to feed into northern and western Scotland during the early hours, bringing some patchy rain here. Extensive low cloud along with some sea fog affected coasts in west Wales and southwest England, and few patches of stratus formed inland across other parts of Wales, the Midlands and southwest. It was a warm night, especially in the southeast, with temperatures but it was much fresher in parts of Scotland.

For the vast majority of the UK there was plenty of sunshine on offer throughout the day with light northerly breezes. However, it was cloudier across parts of Scotland at times, particularly northwest Scotland. Sunshine was limited in Northern Ireland too. Coastal fog and low cloud cleared away from southwest Wales and some parts of southwest England, but it did remain misty and murky with low cloud in some areas of Cornwall throughout the day, mainly the north coast. The highest temperatures were across southern counties of England.

Summary of the UK Weather for Sunday 05 August 2018

Further patchy rain continued to feed into parts of northwest Scotland during the early hours, with the odd spot across eastern Scotland too. Elsewhere it was a dry start to Sunday, with largely clear skies across eastern and southern England. It was on the cool side across parts of the west, but temperatures held into the high teens in the southeast.

Most areas of England and Wales saw lots of sunshine through the day on Sunday, aside from some mist and fog patches along the north coast of Cornwall and the far west of Cornwall too. These became more extensive in this area towards the late afternoon and early evening. In the sunshine it was another very warm day, especially in the southeast.

Summary of the UK Weather for Monday 06 August 2018

For many it was dry during the early hours, with clear skies. Patchy rain and drizzle moved across northern areas though, with some thick and low cloud here. Towards dawn, mist, fog and low cloud moved into the southwest in particular. It was another uncomfortable night's sleep for many, with temperatures in the high teens.

Through the day time there were a few showers and variable amounts of cloud across northern England, Northern Ireland and Scotland. Elsewhere, the mist and fog in western England and Wales lifted to leave a fine day with sunny spells. Central and southern parts of England stayed dry with clear blue skies through the day.

Daily Weather Summary for Tuesday 07 August 2018

This day's summary created 14/08/2018 03:00

Summary of the UK Weather for Tuesday 07 August 2018

It was relatively quiet weather wise overnight across the United Kingdom. A weakening cold front continued to edge southeast into northern England, Wales and southwest England, with some low cloud and patchy light rain and drizzle at times, mainly on the hills. Meanwhile, much of southern and eastern England stayed dry with clear skies and it was another warm and humid night in southeast England, where temperatures held up into double figures. It was a much cooler and fresher night across Scotland.

Through the day it was another hot one across central and southeastern England with plenty of strong sunshine. Cloud thickened through the afternoon with the odd spot of showery rain but most remained dry. Further north and west it was cloudier with some rain and drizzle as well as low cloud around the coasts of Wales and northwest England as a cold front moved through. A few sunny spells developed into the afternoon too but it felt much fresher here. Later in the evening some thunderstorms moved up from the continent into southern England.

Summary of the UK Weather for Wednesday 08 August 2018

The recent hot spell of weather came to an end during the early hours of Wednesday, with thunderstorms affecting parts of southeast England, mainly in Kent and Sussex. However these cleared away quickly. Elsewhere, it was a mostly dry night, with clear spells and it was much fresher across northern and western parts of the UK, with some scattered showers.

Sunshine and showers were the order of the day on Wednesday, with the majority of these across central, western and northern parts of the UK. Some of the showers were on the heavy side in the afternoon, with a couple of thunderstorms reported across the Midlands. Much of southeast England and East Anglia remained dry and mostly sunny. Temperatures were around average for the time of year in southeast England, but elsewhere it was a little cooler than average.

Summary of the UK Weather for Thursday 09 August 2018

Through the early hours of the morning, it rained in many parts of central and southeastern England, with some heavy bursts at times. Elsewhere across the UK there were clear spells and dry conditions, except for western Scotland and parts of Northern Ireland, where there were some heavy showers. During the morning the wet weather across the southeast became more persistent. Heavy outbreaks of rain affected much of East Anglia into the afternoon, as well as London and Kent. Elsewhere, there were showers for the west, especially across Northern Ireland and western Scotland. Northern England and Wales saw the best of the sunshine. Temperatures were generally a little below average for most places, but especially so in southeast England.

Summary of the UK Weather for Friday 10 August 2018

Most of the UK was dry through the early hours of the morning, although there were a few showers around to begin the day. Towards dawn, more showers arrived from the west and these were heavy in places. It was another chilly night, especially in the north, where there was a grass frost in parts of Scotland.

Through the day, the showers from the southwest became widespread across the country. Hail, thunder and lightning were mainly reported in central and southern areas, with squally winds. 70 mph was recorded on the Isle of Wight, and Thorney Island had 22.4 mm of rain in an hour. There were also reports of fallen trees in southern counties. A high of 21.2 C was recorded at Filton.

Summary of the UK Weather for Saturday 11 August 2018

A few showers affected northeast Scotland overnight. Elsewhere it was largely dry, with mostly clear skies, allowing it to turn chilly. A touch of grass frost formed in rural northern areas. However, cloud increased across southwest England and the far south and southwest of Wales, with patchy rain arriving across Devon and Cornwall. A minimum temperature of 0.2 C was recorded at Katesbridge.

For many it was a chilly but sunny start to the day. The patchy rain and cloudy, grey skies in the southwest slowly moved into Wales too, with some heavy outbreaks. Skies clouded over for much of central and western England and Northern Ireland, with some spots of rain and drizzle here. It was windy in the west, especially along the coast. Northern and eastern England held onto the best of the sunshine into the afternoon, with rather cloudy skies across Scotland and some showers in the far west of Scotland.

Daily Weather Summary for Sunday 12 August 2018

This day's summary created 28/08/2018 10:15

Summary of the UK Weather for Sunday 12 August 2018

The early hours of Sunday saw cloud and outbreaks of heavy rain pushing north across much of the UK. Parts of south Wales and southwest England saw the heaviest rain, where there was also extensive low cloud. Only the far southeast of England and parts of northern Scotland remained dry.

During the day, many places were cloudy with some outbreaks of rain, heavy at times, especially across Wales and southwest England first thing. The rain moved steadily eastwards into central and southeastern parts of England, where again it was heavy at times, although parts of East Anglia stayed predominately dry with some brighter spells. It was a relatively warm and humid day. Meanwhile, brighter spells slowly developed across western parts, but with some heavy and thundery showers breaking out over parts of Wales during the afternoon. A band of cloud and rain was quite slow-moving across Scotland, although to the north of this it was drier, brighter and cooler, with the best of any sunshine confined to the Northern Isles.

Summary of the UK Weather for Monday 13 August 2018

Skies were on the cloudy side across the UK overnight, with outbreaks of rain becoming confined to the north and east. There were some heavy bursts of rain in northern England through the night with some hill fog here too, and for many it was a mild and muggy night.

Much of Scotland and Northern Ireland was rather cloudy, with some rain at times, which turned patchier later in the day. Elsewhere, there was a good deal of cloud around at first, but some bright and sunnier spells developed for many during the afternoon, especially across Wales and southwest England, once earlier showers faded away. Meanwhile, there has been some heavy showers and thunderstorms affecting northern and eastern parts of England, which occasionally merged to give some longer spells of rain at times. It was a warm day in the sunshine and it felt rather humid, especially in the southeast.

Daily Weather Summary for Tuesday 14 August 2018

This day's summary created 21/08/2018 03:00

Summary of the UK Weather for Tuesday 14 August 2018

For most, it was dry through the early hours, but the skies were mainly cloudy, with some hill fog. There was some light rain to northeast England, and the east of Scotland. The wind was light, and towards dawn it stayed dry for most. A band of rain approached the far west of Scotland and Northern Ireland however, with heavy outbreaks.

Through the day some sunny spells did emerge but for most it was a cloudy day. There was also some low cloud around western coasts, and across the Channel Islands. For many it was a dry day but there was the odd spot of rain around, especially across Scotland and Northern Ireland where early heavy rain became lighter into the afternoon. It was also pleasantly warm in the sunshine, especially in the southeast.

Summary of the UK Weather for Wednesday 15 August 2018

During the early hours of Wednesday, outbreaks of heavy rain pushed in across western Scotland, Northern Ireland and northern England, accompanied by some strong and at times gusty winds. Elsewhere, it was dry but cloudy but this helped to keep temperatures on the warm and muggy side, making it a fairly uncomfortable night for sleeping. Outbreaks of rain then continued across parts of Scotland during the day with the rain turning heavier and more persistent as it pushed into western Scotland and some parts of Northern Ireland as the afternoon went on. It remained fairly cloudy across western parts of England and Wales too, with some light and patchy outbreaks of rain and drizzle, which steadily turned heavier through the afternoon, particularly over the hills of Wales and northwest England. Across eastern Wales and central and eastern areas of England, it was drier and brighter with some sunny spells breaking through during the day. Temperatures were close to average under the cloud and rain, but in the brighter spells further south and east it was a warm afternoon with temperatures a few degrees above average.

Summary of the UK Weather for Thursday 16 August 2018

A band of heavy rain spread steadily southeastwards through the early hours of Thursday, affecting most parts of England and Wales giving a thoroughly wet start to the day. The far southeast of England remained dry, whilst across Scotland and Northern Ireland it turned clearer with scattered showers. It was a warm and muggy night ahead of the rain band, but it began to turn fresher in the northwest. The heavy rain continued to move southeastwards during the day, bringing heavy rain to all parts as it moved through. Clearer and fresher conditions developed behind with plenty of sunshine. By the end of the day the rain had cleared away from all parts except the very far east of Kent where it remained cloudy. Across Scotland, Northern Ireland, some parts of northern England, Wales and southwest England, a scattering of showers moved in. These were heavy with hail and thunder across parts of Northern Ireland and Scotland. Despite the cloud and rain it still felt pleasantly warm in the sunshine, particularly across England and Wales.

Summary of the UK Weather for Friday 17 August 2018

On Friday a ridge of high pressure was centred to the southwest of the UK, and low pressure centred over Iceland. In combination, these brought a westerly flow across the UK and a warm front approached from the west. Through the small hours of Friday morning there were much of the UK had clear skies, although cloud and patchy light rain moved into western Scotland and Northern Ireland, with rain becoming widespread across Northern Ireland by dawn. Patchy light rain and cloud continued to move across northern Wales, northern England, and southwest Scotland throughout Friday. Across southern Wales and England it remained settled, fine and dry with some sunny spells. Across the north of the UK it turned windy through Friday with a fresh westerly or southerly breeze.

This day's summary created 25/08/2018 03:00

Summary of the UK Weather for Saturday 18 August 2018

At the start of Saturday an extension of the Azores high pressure was centred over Biscay to the south of the UK, and low pressure was centred northwest of Scotland. A waving front lay from the mid-Atlantic to Northern Ireland and across the Scottish Borders. In the Atlantic ex-tropical storm 'Ernesto' approached the UK from the west. There were strong winds across the northern half of Scotland and the Northern Isles in association with the nearby low pressure. Patchy light rain from the waving front affected the western coast of Scotland. It was cloudy and mild across much of the UK. Through Saturday day it remained a largely cloudy day with relatively persistent rain affecting the west coast of Scotland and strong winds in the north. Ex-tropical storm Ernesto reached landfall across Northern Ireland through Saturday evening, bringing some persistent rain here and a strengthening southwesterly wind across the Southwest and West Wales. It remained dry but cloudy across the Southeast. Northern Scotland stayed dry with clear spells through Saturday night.

Daily Weather Summary for Sunday 19 August 2018

This day's summary created 26/08/2018 03:00

Summary of the UK Weather for Sunday 19 August 2018

There was heavy rain from Northern Ireland to southern Scotland and northern England during the early hours, accompanied by gales in exposure. To the north of the rain it was clear and chilly. To the south of the rain (across the rest of England and Wales) it was mild and humid with a little drizzle over the hills. Early in the day, the heaviest of the rain had moved out into the North Sea; leaving less heavy rain and hill fog in its wake. Across the rest of England and Wales it was cloudy in the west, with low cloud lingering over windward coasts in the southwest. To the lee of high ground, some sunny breaks developed in the cloud, with some long sunny periods developing during the afternoon. Northern Ireland saw a few bright spells but also a scattering of light showers. It was warm and humid where the sun came out, and temperatures were around average for the time of year for most.

Summary of the UK Weather for Monday 20 August 2018

Monday began with a broad area of low pressure centred to the west of the UK. A waving front lay across Northern Ireland and northern England with warm, humid air to its south; and a fresher, cleaner air to the north. Winds were light across the UK throughout the day. During the early hours of Monday morning the UK was mostly cloudy with some drizzly outbreaks occurring along the front and principally effecting exposed western areas, with some peaks in the Pennines seeing persistent drizzly spells throughout the day. In the Southwest coastal areas were affected by fog along windward coasts. Northern Scotland saw the best of clear spells and dry weather. During the daytime the Southeast saw some sunny spells, however, it turned generally cloudy by the afternoon and slight showers developed widely across England and Wales. The showers died out through the evening. Monday night mirrored the morning with cloudy, drizzly weather across Northern Ireland and northwest England; clear conditions across northern Scotland; and, cloudy but dry weather across the Southeast.

This day's summary created 28/08/2018 03:00

Summary of the UK Weather for Tuesday 21 August 2018

Through the small hours of Tuesday morning much of the UK was cloudy or overcast. The cloud was low across coastal areas of Wales, southwest England, Northern Ireland, northeast England and southeast Scotland, producing some spells of light drizzle. With the cloud it was a warm and humid start for many, away from the far north of Scotland. Skies then remained fairly cloudy across much of Scotland, Northern Ireland, Wales and southwest England during the day with further areas of low cloud, mist and fog for some. Later in the day it turned breezier across the far northwest of Scotland with some more persistent rain edging into the Western Isles through early evening. Elsewhere, across many central and eastern parts of England after a cloudy start it turned much brighter with plenty of sunshine developing through the day. Winds were light here so with lots of sunshine it turned very warm through the afternoon. Temperatures on the whole were above average, especially so in the sunnier spots. Where it remained cloudy and damp all day they were nearer to average.

Summary of the UK Weather for Wednesday 22 August 2018

Rain pushed in across Scotland and Northern Ireland through the early hours of Wednesday morning, bringing some heavy bursts in places as well as fairly gusty winds. To the south of this it remained warm and humid with temperatures holding up, especially in the west and southwest, although there were some cooler spots under clear skies in the southeast. This also brought some areas of mist and fog across southeast England towards dawn. Some light and patchy drizzle also began to affect Wales and southwest England as low cloud rolled in. Meanwhile in the northwest it began to turn fresher as the rain cleared. Through the day the rain continued its journey slowly southeastwards, eventually lingering across Wales and northern England. To the south of the rain it was very warm and muggy with some sunny spells, particularly across parts of Lincolnshire and East Anglia. To the north of the rain, it continued to turn fresher with some sunny spells, but also a few light showers in the far northwest of Scotland. Temperatures were widely above average, but returned closer to average behind the rain.

This day's summary created 30/08/2018 03:00

Summary of the UK Weather for Thursday 23 August 2018

Rain pushed steadily southeastwards across England and Wales through the early hours, bringing some heavy rain for a time, especially towards the morning across Lincolnshire, the east Midlands and East Anglia. The frontal zone brought low cloud, mist and in places fog. Ahead of the rain it remained warm and muggy with temperatures holding up in the high teens. However, behind the rain it was much fresher with temperatures falling into single figures across many northern areas. A second band of heavy, showery rain also spread into Northern Ireland, and Scotland later, sinking southeastwards. Behind this it turned even fresher with blustery showers later.

It was a fresher feeling day with the rain in the southeast moving into the North Sea, becoming dry in Kent by the late afternoon. Scattered, often heavy showers continued across Scotland and Northern Ireland, but there was some sunshine here too. A more organised band of showery rain moved across northern England and Wales, with some heavy bursts, and skies were largely cloudy for central and southeastern England. By the end of the afternoon, patchy rain also moved into the southwest, and thunderstorms began in eastern Scotland.

This day's summary created 31/08/2018 03:00

Summary of the UK Weather for Friday 24 August 2018

It was a dry night for many parts of the UK, with clear spells. Showers persisted along northern and western coasts though, and they were heaviest and most frequent across western Scotland, Northern Ireland and northwest England. There was also the odd thunderstorm in the north. The south and southeast remained dry throughout. It was rather breezy across all areas and it was a cooler night for all, especially in the southeast.

Through the morning the blustery showers continued in the northwest, moving across Wales and the southwest. Central and southeastern areas began sunny, although by midday the cloud started to build, with showers moving across the Midlands too. Thunderstorms began across Lincolnshire and northern England into the afternoon, and by the end of the day, there were thunderstorms across Wales, central areas and the southeast.

This day's summary created 01/09/2018 03:00

Summary of the UK Weather for Saturday 25 August 2018

Yesterday's showers continued through the night, mainly across areas exposed to the northwesterly breeze. This meant that many central, eastern and southern areas saw largely clear skies, with temperatures widely falling comfortably into single figures. In the north under the clearest skies there was a ground frost in prone spots.

For many it was a chilly but sunny start to the day. There were a few showers across Northern Ireland and Merseyside, with some rumbles of thunder in the northwest. Into the afternoon some cloud bubbled up across the country, still with plenty of sunny spells, and some thundery showers moved across the Midlands and East Anglia. There were isolated showers for northern Scotland too, but for many it was much less windy than yesterday.

Summary of the UK Weather for Sunday 26 August 2018

Sunday started largely dry but a band of rain quickly spread in Northern Ireland after midnight. The rain then continued to move eastwards reaching western Scotland, northwestern England, Wales and southwestern England by dawn. It was a cool night ahead of the rain band. The rain continued to move eastwards during the day and the heaviest rain was in north Wales. The main rain band eventually cleared from Wales, northern Ireland and western parts of England and Scotland. However, it remained rather cloudy, breezy and damp here. Rain cleared from the southeast of England around 2300 but continued in northern Scotland.

Summary of the UK Weather for Monday 27 August 2018

Monday began with an area of low pressure centred over northern Scotland and with a weak cold front lying northeast to southwest from Norfolk to Hampshire. An occluded front lay east to west across northern Scotland and the bulk of the UK lay under a westerly flow of air from off the Atlantic. A ridge of high pressure to the west of the UK would build westwards through the day. Through the small hours of Monday morning it was cloudy and dry for many parts, although light rain or showers affected Northern Ireland, northern England, and northern and western Scotland. There was a light to moderate westerly to southwesterly breeze. Through daylight hours it remained largely cloudy, especially in the west where light showers continued to form. It was a drier in the eastern, where some sunny spells developed. The wind stayed a moderate westerly. By late afternoon it was generally cloudy across most parts. The showers became fewer and further between and by Monday night it was largely dry but cloudy with light winds.

Summary of the UK Weather for Tuesday 28 August 2018

Tuesday began with a ridge of high pressure over the UK with low pressure situated to the south of Iceland. Through the small hours of the morning the UK was mostly dry and covered with a fair amount of cloud and temperatures were on the mild side. A cold front approached the UK, bringing some light rain and drizzle, as well as a freshening southwesterly breeze to the Outer Hebrides and northwestern fringes of the mainland a couple hours before dawn. Through daylight hours the weather continued in this pattern, with the majority of the UK sitting under the mostly cloudy, but dry and settled conditions of the high pressure; and northwestern parts of Scotland suffering an overcast day with a fresh breeze and spells of rain. Some breaks in the cloud did occur, in particular across eastern England and northeast England. The rain on the cold front eventually reached Northern Ireland late on Tuesday afternoon. On Tuesday evening the cold front continue to make slow progress southeastwards across Northern Ireland and Scotland. England and Wales remained dry with light winds.

Summary of the UK Weather for Wednesday 29 August 2018

Showery rain pushed across southern England through the early hours of Wednesday with some heavy bursts in places, although not all areas saw the rain. Further north and west it was cloudy with some rain steadily sinking southeastwards. As this rain clears through, clearer skies emerged but there was also a scattering of showers. The lowest temperature was under these clearer skies with low single figures minima recorded in Northern Ireland. Through the day spells of heavy rain took a while to clear East Anglia and the far southeast of England. Elsewhere across England and Wales, skies were fairly cloudy as the weak weather front continued to move southeastwards. This brought a few spits and spots of rain, especially across southwest England where a few heavier showers developed for a time across Devon and Dorset. Otherwise skies brighten to the north and west, but it was breezier, especially in the north and around western coasts of Wales and the far southwest tip of Cornwall. Showers pushed in across the far northwest too.

Summary of the UK Weather for Thursday 30 August 2018

Cloud cleared overnight into Thursday morning, with a mixture of cloudy skies and clearer intervals across the UK during the early hours. Showers also tended to clear away but a few remained across parts of Scotland and Northern Ireland. Under those clear skies it was a cool and fresh night and we also saw a few patches of mist and fog develop, especially in western parts of the UK.

Through the daytime, most parts of the UK were dry and warm with sunny spells. However, there were a few showers, particularly across Wales, southwest England, southeast England and Scotland. They were most noticeable in Cornwall, where a funnel cloud developed.

Summary of the UK Weather for Friday 31 August 2018

Through the early hours it was dry for much of the UK. There were some outbreaks of showery rain in Scotland and the far southwest though, but for many there were clear spells. Under these starry skies however, isolated patches of mist and fog developed. With light winds it was chilly for many, especially in the north. Through the daytime it stayed dry and sunny for most of the UK. There were a few showers in southeast England, with reports of a funnel cloud of the Kent coast. During the afternoon, a band of cloud began approaching from the west, arriving in Northern Ireland.

Daily Weather Summary for Friday 31 August 2018

Daily Weather Summary for Friday 31 August 2018

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Guidance Notes

UTC = Universal Coordinated Time. For the UK UTC is the same as GMT (Greenwich Mean Time).

National boundaries shown on the European station map are for illustrative purposes only.

Daily extremes

- Data in the table have been manually checked unless denoted by an asterisk.
- Checked values have been manually confirmed by Met Office Observations Quality Management as valid observations from the live database at the time of checking. However, more extreme values may still be possible if they occur after the time of production.
- Asterisked values have been automatically extracted from the live database with no further quality control carried out beyond normal Met Office procedures. This means that some suspect data are possible.
- Duplicate values will be presented if these occur, allowing for up to 10 duplicates.
- Mountain stations above 500 masl are excluded from lowest temperatures, highest gust speeds and greatest snow depths at 0900 UTC. This is because they are not considered representative of low level areas.
- Counties quoted against each station are based on historical county boundaries pre-1974 and may not reflect current administrative boundaries.

Analysis charts and satellite imagery

- The satellite imagery is infra-red imagery from the geostationary MSG satellite.
- The rainfall image is derived from satellite data from MSG and rain-radar data. This represents a snapshot of instantaneous rain-rates at 0000 UTC and 1200 UTC and so does not necessarily reflect daily accumulations in the rainfall station map.
- Any analysis charts or satellite images which are unavailable will be displayed as white space.

Station maps

- The UK maps show station data for the same set of stations presented UK data table. These stations are selected to provide good spatial coverage across the UK; they represent only a fraction of the overall UK observing network.
- Wind speed maps show wind speed in Kt and direction both averaged over the hour up to the time of observation. 1 Kt = 1.151 mph.

Hourly station data

- The data tables provide spot hourly observations from synoptic messages at 0000 and 1200 UTC. Missing data are denoted by '-'.
- Pressures are mean sea level pressure in hPa.
- For UK stations, Gibraltar and Jersey, the wind speeds and directions are both averaged over the hour up to the time of observation. However, for European stations wind speeds and directions are both averaged over a 10-minute period up to the time of observation.
- Wind speeds are in Kt. Wind directions are stored in the database every 10 degrees and have been converted to the nearest point of the compass. These give the direction the wind is blowing from, not to.
- Cloud amounts are in Oktas from 0 (clear) to 8 (overcast). 9 indicates sky obscured (eg by fog).
- Air temperature and dew point temperature are in Celsius.

Temperature maps

- Daily maximum, minimum and grass minimum temperatures are in Celsius.
- The period for the daily maximum temperature on day D is defined from 0900 UTC day D to 0900 UTC day D+1.
- The period for the daily minimum and grass minimum temperatures on day D is defined as 0900 UTC day D-1 to 0900 UTC day D.
- On any given day D the minimum will typically occur in the early hours of the morning and the maximum in early afternoon.

Rainfall, sunshine and max gust speed maps

- Daily rainfall is in mm from 0900 UTC day D to 0900 UTC day D+1.
- Daily sunshine is in hours from Kipp and Zonen CSD1 automatic sunshine records. Bright sunshine is defined as exceeding 120 W/m².
- Max gust speeds are the daily max gust in Kt from 0000-0000 UTC

Snow maps

- The day of snow falling map displays data from present weather sensors, showing stations which have recorded sleet or snow falling at any point in the day (0000-0000 UTC).
- The snow lying map shows level snow depth as recorded by the automatic snow depth sensors at 0900 UTC. These snow depth sensors do not record snow depth if this is less than 2cm.

- Snow depth sensors are normally operational from October to April, in the event of snow falling outside this period data availability may be limited.
- Snow maps will only be displayed if one or more of the selected stations on that date have recorded either snow falling or non-zero snow depths. If snow maps are not displayed it is still possible that other stations in the network have recorded a day of sleet or snow falling or non-zero snow depth.
