

This polar projection map of the Arctic region displays a complex weather system. The map features numerous low (L) and high (H) pressure systems, each with associated numerical values. Color-coded lines (green, blue, red, black) represent different weather fronts or boundaries. The map includes a grid of latitude and longitude lines and outlines of the Arctic coastline.

Key features include:

- Pressure Systems:** Numerous low (L) and high (H) pressure systems are marked with numerical values. Examples include L 473, H 236, L 373, H 39, L 163, H 100, and L 99.
- Fronts:** Color-coded lines represent different weather fronts or boundaries. Green lines often indicate cold fronts, blue lines indicate warm fronts, red lines indicate occluded fronts, and black lines indicate other significant boundaries.
- Geographic Features:** The map shows the Arctic coastline and major landmasses, including North America, Europe, and Asia.
- Grid:** A grid of latitude and longitude lines is overlaid on the map, with latitude lines ranging from 60°N to 90°N and longitude lines ranging from 0° to 360°.
