

A map of the United Kingdom with the study area in Scotland highlighted in yellow. A yellow box with the letters 'S' and 'W' is placed over the study area. The map shows the outlines of the United Kingdom and Ireland, with the study area in Scotland highlighted in yellow. A yellow box with the letters 'S' and 'W' is placed over the study area.

Strengthening southwesterly winds will bring an increasingly warm and moist airflow from the Atlantic across northwestern parts of the UK, resulting in some persistent and sometimes heavy rainfall, especially in the West Highlands. There remains substantial snow cover on higher ground in parts of Scotland, and its rate of thaw will increase as the warmer air arrives. The resulting water due to either rainfall or snowmelt could cause some localised flooding and transport disruption.

Valid from **12:00 on Wed, 05th Mar 2014** until **03:00 on Thu, 06th Mar 2014**

The public should be aware that the combination of heavy rain and melting snow will lead to difficult driving conditions.
