

## National Severe Weather Warning Service

### Chief Forecasters Assessment

An occluding frontal system will move east across the UK during Tuesday morning bringing a mixture of rain, sleet or snow. This will fall onto sub zero surfaces for a time to give a risk of ice. Snow will mainly affect higher ground above 150 metres, with accumulations of 1 to 3 cm in places, but falling to low levels for a time in the northeast of Scotland and over parts of northern England. Snow will become confined to the hills through the morning before clearing eastwards.

The Met Office have issued a **Yellow Warning of Ice**

Valid from **03:00 on Tue, 08th Mar 2016** until **09:00 on Tue, 08th Mar 2016**

A widespread frost will develop during Monday evening, then outbreaks of rain, sleet or snow will arrive from the west during the first part of Tuesday. Rain or sleet falling onto freezing surfaces will bring a risk of ice, whilst snow will fall briefly to quite low levels, especially across the northeast of Scotland and northern England, but will become confined to high ground through the morning.

Please be aware of the risk of icy surfaces and the potential for some difficult travelling conditions on Tuesday morning, especially on high level routes.
