

A map of the United Kingdom with the study area in central Scotland highlighted in yellow. The study area is labeled with a star icon.

An increasingly cold northwesterly wind will become established across northern England later on Sunday and into Monday, leading to showers turning increasingly wintry, especially over hills. The highest risk areas for seeing lying snow are the higher routes in Cumbria, Lancashire and Cheshire, but higher ground towards the eastern section of Greater Manchester may also be affected. These areas could see between 2 and 6cm of snow by Monday morning.

Valid from **21:00 on Sun, 04th Dec 2011** until **11:00 on Mon, 05th Dec 2011**

The public should be aware that the wintry conditions could cause travel disruption in places.
