

National Severe Weather Warning Service

Chief Forecasters Assessment

An area of low pressure will move eastwards over England and Wales on Saturday. Persistent rain over northern England associated with a frontal band will allow rain totals to build up, whilst slow moving thundery showers over central Wales and the Midlands with potential for 20-25 mm of rain in an hour could also cause problems. In the south, blustery heavy showers driven in by strong winds could well hamper outdoor activities, with scope for gusts to around 50 mph in the west or southwesterly wind. Rainfall totals of 40-60 mm could build up locally anywhere across the region. As is usual with showers there is some uncertainty in the detail and the warning may be updated to reflect new information.

The Met Office have issued a **Yellow Warning of Rain**

Valid from **00:05 on Sat, 25th Aug 2012** until **23:55 on Sat, 25th Aug 2012**

Spells of heavy rain and thundery showers have the potential to cause disruption during Saturday. The public should be aware of the risk of localised surface water flooding, with strong to gale force winds an additional hazard for southern counties.
