

National Severe Weather Warning Service

Chief Forecasters Assessment

A vigorous depression is expected to run over the southwest of England on Saturday morning bringing some heavy rain in advance, and very strong winds on its southern flank. However, there is some doubt about its track, with some computer models taking it further north to allow very strong winds to affect SW England more widely, so the alert at this stage is for a low probability of disruption.

The Met Office have issued a **Yellow Alert of Wind**

Valid from **05:00 on Sat, 13th Feb 2016** until **12:00 on Sat, 13th Feb 2016**

An area of very strong winds and large waves is expected to pass close to southwest England on Saturday morning. The most likely scenario is that winds will remain light over the bulk of the area. However, please be aware that there is a low risk of gusts of 60-80 mph and large waves affecting coastal Devon and Cornwall .
