Branch Director (Observation Provision).

1. INTRODUCTION

Drifting buoys operated by European countries, the United States, Canada and E.G.O.S. (European Group on Ocean Stations) provide valuable meteorological data in the North Atlantic Ocean. This report is a summary of the performance of these buoys giving information on the number of buoys operating, the accuracy of reported locations and data quality, timeliness and availability. It is compiled by looking at observations received in the Met. Office Meteorological Data Bank (M.D.B.) and by comparisons of observations with background fields from the Met. Office forecast model. Additional information on buoy operations and data quality is extracted from E.G.O.S. Technical Secretariat reports.

2. SUMMARY OF PRESSURE PERFORMANCE

(a) Buoy deployments, etc.

North of 50deg N

There were 14 buoys reporting pressure at the beginning of the period (this figure includes buoy 25561 which, although not included in the last report was reporting on the first day of this report period) and 9 at the end. (Buoy 44777 which had a mean position north of 50 degN last quarter has drifted south this quarter and is included in the statistics below.). Buoy 44726 ceased reporting on the last day of last quarter. 6 new buoys were deployed during the period (44761, 44763, 44769, 44771, 62696 and 64528). 11 buoys ceased reporting (44515, 44728, 44763, 44779, 47606, 62712, 64587, 65503, 65506, 65508 and 65581). (N.B. Buoy 65581 ceased reporting pressure on 30/01/94 but continued to report other elements).

South of 50deg N

There were 14 buoys reporting pressure at the beginning of the period and 13 at the end. 7 new buoys were deployed (44743, 44760, 62503, 62504, 62505, 62506 and 62606). 8 buoys ceased reporting (44613, 44765, 44774, 44775, 44777, 62501, 62519 and 62520).

(b) Location Accuracy

The location accuracy was similar to last quarter with 39 out of 41 of the buoys reporting having a '% of observations with acceptable positions' greater than 95% (compared to 49 out of 51 last quarter). There were 4 gross errors in location during the quarter, compared with 11 last quarter (see under Data Quality).

(c) Data timeliness

(see note 9 of section 5 for definition of terms.)

Timeliness	Last quarter.	This quarter.
Very Good	26	13
Good	8	10
Satisfactory	6	10
Poor	1	5
Very Poor	10	3
Total no. of buoys	51	41

(d) Data availability

(see note 9 of section 5 for definition of terms.)

Availability	South of 50 degN		North of 50 degN	
	Previous Quarter	Present Quarter	Previous Quarter	Present Quarter
Very Good	--	--	11	10
Good	4	2	3	1
Satisfactory	2	10	8	5
Poor	12	9	3	3
Very Poor	6	--	2	1

The total number of buoy days in the quarter was 2,080 [obtained by summing the number of reporting days for each buoy] (last quarter the total was 3,106) and the number of 'buoy hours' with at least one observation was 27,105 (compared with 36,480 last quarter). Thus, the mean number of hours per day, for days with at least one observation (averaged over all buoys operating in the area) was 13.03 (last quarter the figure was 11.75).

(e) Data Quality - Pressure

Revised RMS Differences

The technique used to assess the quality of pressure data in this report is based on the Revised RMS differences between the observations and the background field from the Global Forecast Model (see note 8 in Explanatory Notes). For buoys south of 50 degN the Revised RMS differences should be less than 2.0 hPa and for buoys north of 50 degN they should be below 3.0 hPa. The buoys whose revised RMS difference were found to lie outside these limits have had their performance described as 'suspect' and are included in the section below. Examination of the time-series plots (see Annex B) indicates the performance of these buoys:-

- 25561 - Pressure data showed a larger than normal scatter throughout the period.
- 44613 - Pressure data showed a bias of approximately 15.0 hPa when the buoy drifted ashore on 17/2. The data was subsequently deleted from the GTS from 24/2.
- 44728 - Pressure data were erratic, particularly from 19/1 to 29/1 and again at the end of the buoy's life.
- 44743 - Data were erratic from 9/3 to 11/3 before returning to a more acceptable level.
- 44760 - A number of gross errors were reported by this buoy from the start of its life until 9/3.
- 44775 - Pressure data were erratic from the beginning of the report period until the end of the buoy's life on 20/1.
- 47606 - Pressure data were erratic from the beginning of the report period until the end of the buoy's life on 19/1.
- 62501 - Pressure data showed a bias of +1.3 hPa throughout the period.
- 62503 - Data showed a larger than normal scatter from 10/3 until the end of the quarter.
- 62514 - A pressure bias of +3.0 hPa existed from the start of the report period until 3/2.

- 62519 - A pressure bias of -0.7 hPa existed from the start of the period until the end of the buoy's life on 14/1.
- 62520 - Pressure data became erroneous towards the end of the buoy's life on 27/1.
- 65503 - A pressure bias of 2.3 hPa existed from the start of the period until the end of the buoy's life on 21/1.
- 65508 - A pressure bias of 1.1 hPa existed from the start of the period until the end of the buoy's life on 19/1.
- 65581 - Pressure data showed a larger than normal scatter from the start of the report period, and it became particularly erratic towards the end of the buoy's life on 30/1.
- 65592 - Pressure data showed a larger than normal scatter throughout the report period.

Biases

5 buoys (excluding those mentioned in the previous section) showed pressure biases greater than 0.5 hPa (pressure biases are determined using the mean value for unflagged data from Annex A). Those buoys whose pressure data showed a bias of greater than 0.5 hPa have also had their performance described as 'suspect'.

WMO No.	Position	Buoy bias(hPa)	Ship bias(hPa)	Period of reports
44761	SOBA	-1.0	+0.7	23/02 - 31/03
44763	S of SOBA	-0.9	+0.7	23/02 - 30/03
62505	NE of SCOS	-0.6	-0.4	11/03 - 31/03
62606	E of SCOS	+0.8	-0.6	9/02 - 31/03
62712	SOBA	+1.6	+0.7	1/01 - 15/01

The ship bias represents the mean pressure biases reported from ships within a radius of 500 nautical miles of the mean position of each buoy.

Gross errors

The observations which appear to lie outside the expected distribution - the 'gross' errors (see Time-series graphs) - have been ringed. (The erroneous observations which occurred at the end of the life of buoys 44777, 47606 and 62520 have not been included in this section.) The observations have been individually examined to see whether the errors lie with the pressure, location or the background field. Out of 117 occasions the results are as follows -

ERROR	NUMBER		COLLECTING CENTRE
	Last quarter	This quarter	
bg field	2	0	-
location	0	0	Oslo
location	1	0	Sondre Stromfjord
location	5	2	Paris
location	5	2	US Air Force
location	0	0	Washington
pressure	61	42	Oslo
pressure	2	16	Sondre Stromfjord
pressure	41	55	Paris
pressure	5	0	US Air Force
pressure	7	0	Washington
Total no. of buoy hours	36,480	27,105	

During the quarter 113 gross pressure errors were transmitted as compared to 116 last quarter. The number of gross location errors from the Local User Terminals decreased slightly (4 compared to 11 last quarter).

(3) Air Temperatures and Sea Surface Temperatures

The following table shows the mean and standard deviation of observation minus background differences for air temperatures and sea surface temperatures. Figures in brackets are for the observations from voluntary observing ships within a radius of about 500 nautical miles of the mean position of each buoy.

(Note : The calculations below include gross errors. Therefore, in some instances, the figures may be slightly misleading.)

WMO No.	Air Temperature Mean	Air Temperature St.Dev	No. of Obs	Sea Surface Temperature Mean	Sea Surface Temperature St.Dev	No. of Obs.

Statistics of (ob-bg) differences for buoys reporting this quarter and all ships within 500 nautical miles

Buoys 44728 (19.9), 44761 (2.2), 44765 (-10.8), 44771 (6.5), 44775 (4.1), 44779 (18.6), 47606 (-13.2), 62711 (6.7), 64587 (10.7), 65506 (11.8) and 65581 (2.7) all showed significant air temperature biases.

Buoys 44743, 44761, 44775 and 65581 showed significant sea surface temperature biases of -43.3 degC, 2.2 degC, -1.5 degC and 1.3 degC respectively.

(4) Winds

The following table shows the mean and standard deviation of observation minus background differences for wind speed and direction. Figures in brackets are for the observations from voluntary observing ships within a radius of about 500 nautical miles of the mean position of each buoy (Note - it is not known what proportion of the ships' winds were measured rather than estimated visually using the Beaufort Scale). The statistics for this report can be compared with those for ships and the relative quality of the wind data from each buoy can be assessed. (N.B. Buoys 44769, 44771 and 62696 are not fitted with wind sensors. However both wind speed and direction observations have been coded up as 0, hence producing a misleading value for the percentage of wind data present in the Table of Statistics (Annex A)).

WMO No.	Period	Wind speed(kn)		Wind direction(Deg)		Number of Obs.
		Mean	St.Dev	Mean	St.Dev	
13556	01/01- 31/03	-3.3(3.8)	2.9(7.3)	4.2(0.6)	17.7(30.1)	1302(68)
13561	01/01- 31/03	-2.3(3.5)	3.2(15.2)	-7.5(-2.4)	18.4(29.4)	1309(181)
44728	01/01- 30/03	-7.3(3.1)	6.6(8.4)	3.2(8.3)	35.2(28.0)	1595(22)
62502	01/01- 31/03	-0.6(3.0)	3.6(9.7)	-13.7(-7.9)	20.9(29.7)	1454(453)
62505	11/03- 31/03	-1.2(2.7)	3.5(9.9)	-5.6(-8.3)	16.3(27.2)	239(365)
62506	11/03- 31/03	-1.8(2.8)	2.8(11.4)	-3.9(-7.8)	15.2(27.7)	242(367)
62695	01/01- 31/03	-6.0(2.0)	4.8(6.5)	-13.4(2.4)	21.7(32.3)	940(82)
62712	01/01- 15/01	-6.6(9.3)	9.4(11.0)	15.0(6.3)	24.2(27.5)	114(24)

Statistics of (ob-bg) differences for buoys reporting this quarter and all ships within 500 nautical miles

Buoys 44728, 62695 and 62712 showed significant wind speed biases of -7 knots, -6 knots and -7 knots respectively.

5. EXPLANATORY NOTES:

1. Buoy owners are as follows,

CA - Canada	P - Portugal
F - France	UK - United Kingdom
D - Germany	US - United States
N - Norway	IC - Iceland
NL - Netherlands	EG - EGOS
IR - Ireland	? - unknown

2. Number of observations received is the number received at Bracknell in the Meteorological Data Bank (MDB). If identical reports are received which have originated at different Collecting Centres, the earliest one received at Bracknell is stored in the MDB.

3. An observation with valid Time and Date is one that contains no coding errors in the Date/Time group.

4. An acceptable position for an observation is within a distance d of the last acceptable position where $d=vt$ and,

$$v = \text{maximum drift speed} = 1/4 \text{ knot}$$
$$t = \text{time between observations.}$$

5. The percentage of elements present is calculated from the total number of observations received.

6. The delay is (Time of Receipt at Bracknell) - (Time of Observation).

7. The mean number of observations per day is calculated from the total number of observations received divided by the number of days in the period. It therefore includes 'quasi-identical' observations, ie those made within a few minutes of one another. For this reason the mean number of hours per day with at least one observation and the % of hour periods without an observation has been included, where an 'hour period' is defined as the period from HH-30 to HH+29 minutes.

8. Mean (OB-BG) is the mean value of (Observation-Background) Pressure, where the Background is the 6-hour forecast from the Global Forecast Model. RMS (OB-BG) is the Root Mean Square value of (Observation-Background) Pressure differences.

Unflagged data are those data used in model analyses.

Flagged data (ie. unused observations) are those observations of suspect quality and all observations reported by a buoy at a frequency greater than 5 times every 6 hours, with accepted observations being at least one hour apart. Thus, those buoys which report most frequently have a higher percentage of flagged data.

The Mean calculated over Unflagged Data gives an indication of the instrument bias, since any gross errors have been excluded from the calculation.

The Revised RMS is based on all data except for the few that contain gross errors (as indicated on the time-series graphs - see Annex B).

9. The performance categories are defined in the table below.

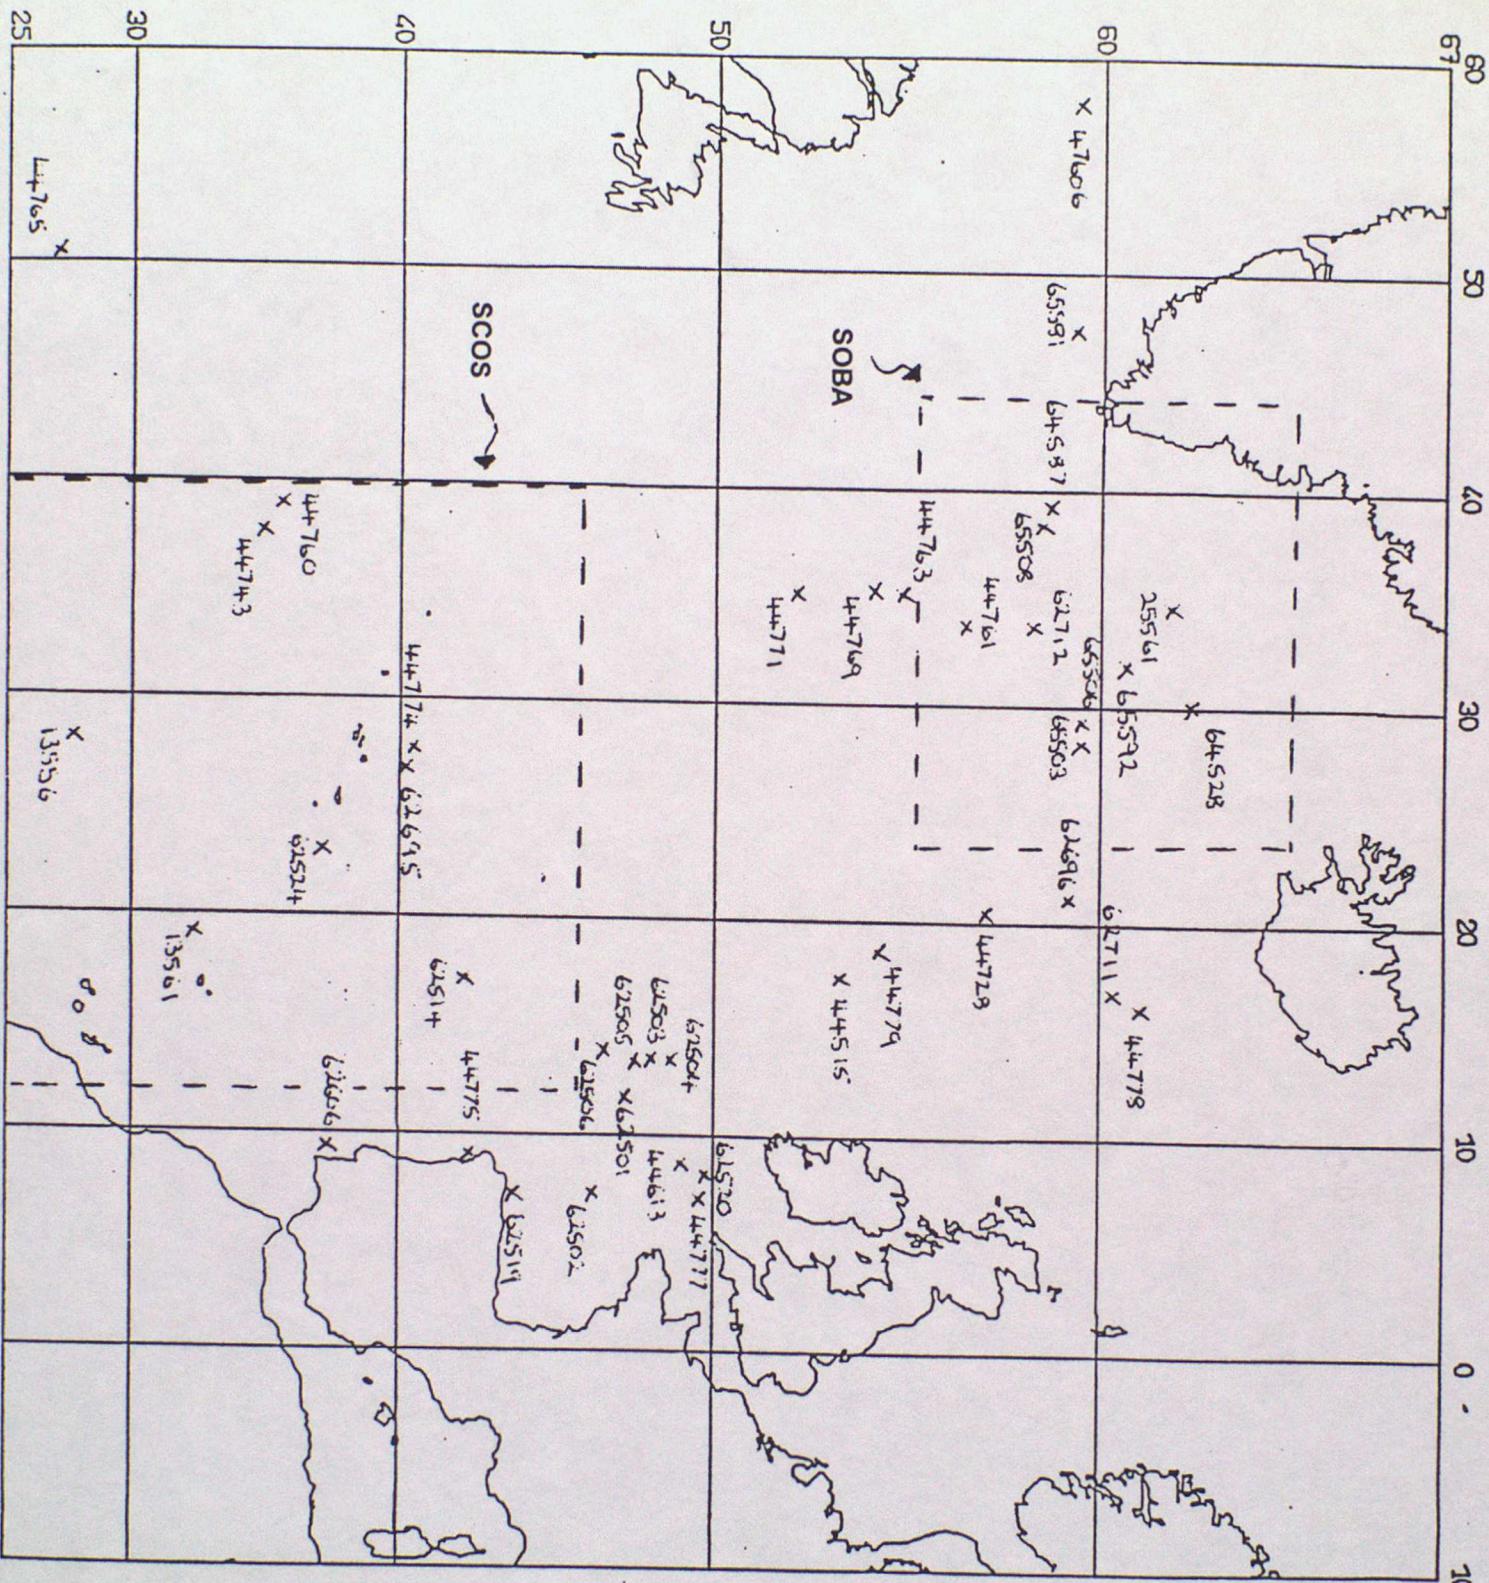

Performance	Availability (mean no. obs/day)	Timeliness (Median delay in mins)
Very Good	> 35	< 60
Good	25-35	60-119
Satisfactory	15-24	120-179
Poor	5-14	180-239
Very Poor	< 5	> 240

(N.B. WMO requirements state the need for only 4 observations per day from marine stations.)

The pressure quality is assessed from the Revised RMS and the Mean (for unflagged data).

Performance	Pressure Quality			
	North of 50 degN		South of 50 degN	
	RMS	MEAN	RMS	MEAN
		(hPa)		(hPa)
Acceptable	< 3.0	< 0.5	< 2.0	< 0.5
Suspect	> 3.0	> 0.5	> 2.0	> 0.5
