

National Severe Weather Warning Service

Chief Forecasters Assessment

There remains uncertainty regarding the timing and extent of the rain, sleet and snow hence the extent of the ice risk. Some 2 to 5 cm of snow is likely locally above around 250m, chiefly over central Scotland. However, it looks as if surfaces should slowly rise above freezing on Wednesday morning.

The Met Office have issued a **Yellow Warning of Ice**

Valid from **16:00 on Tue, 20th Dec 2011** until **11:00 on Wed, 21st Dec 2011**

A mixture of rain and sleet with some snow on high ground, will move slowly and erratically northeast across central and northern Scotland through Tuesday night into Wednesday morning. As this falls onto frozen ground, the public should be aware that ice is likely to form on untreated surfaces.
