ANNUAL SUPPLEMENT	pp. 49-56
-----------------------------	-----------

METEOROLOGICAL OFFICE.

DAILY READINGS AT METEOROLOGICAL STATIONS
OF THE FIRST AND SECOND ORDERS.

INTRODUCTION TO THE TABLES FOR THE YEAR 1915.

THE present tables are issued in continuation of the annual volumes of "Meteorological Observations at Stations of the Second Order," which have been published since 1873. They contain daily observations made at 9 h. and 21 h. at eight selected stations in the British Isles. The corresponding monthly and annual summaries will be found in the Monthly Weather Report of the Meteorological Office which is issued as a supplement to the Weekly Weather Report. Daily Values for three Observatories and Tables of Wind Components for four anemograph stations will be found in the "Geophysical Journal," Part III., Section 2, of the Year Book. On pp. 49-56 will be found the Annual Supplement, which shows at one opening the mean values or totals for each month and for the whole year of the various elements at eleven stations, together with the extreme temperatures and the maximum rainfall. (See note at the foot of Table III. of each issue of the Monthly Weather Report, "British Meteorological and Magnetic Year-Book," Part II.).

In order to render the observations available for general use as early as possible, the volume appears in twelve monthly parts, which are issued usually within five weeks of the close of the month to which the observations refer. The monthly issues can be purchased separately.

RESULTS FOR STATIONS OF THE FIRST AND SECOND ORDERS.

The observations have been made in accordance with the instructions given in the "Observer's Handbook," to which reference should be made for particulars of the types of instruments used, the general regulations regarding their exposure, and the methods of observing.

The form adopted for publishing the results is that prescribed by the Permanent Meteorological Committee of the International Congress of Official Delegates which met in Vienna in 1873. It was agreed upon at a meeting of the Committee at Utrecht in 1874. For the purposes of this publication the form has been amplified, since 1906, to include the depression of the wet-bulb thermometer, the duration of bright sunshine, the minimum temperature on the grass, and the weather at the time of observation, wherever these data are available.

The results of the observations are expressed in metric units in the present volume. The units adopted for the different elements are stated below, and Tables for conversion from British to Metric Units are given on pp. vi-viii.

A list of stations with the names of the Observers and references to previous observations is given on p. ii. Notes giving additional information on the method of stating the results appear on p. iii.

LIST OF STATIONS OF THE FIRST AND SECOND ORDERS.

Station.	Observer.	Aver- ages.	Remarks.
Deerness . . .	M. Spence.	a.b.c.	The following records for Orkney form an approximately homogeneous series: Stromness, 1827-32; Sandwick, 1832-85; Swanbister, 1886-90; Stenness, 1890-91; Deerness, since 1891. For data from 1827-59, see "Meteorological Observations taken at Orkney, with remarks on the Climate," by the Rev. Ch. Clouston (1861). J.S.M.S. from 1856, A. from 1886, B. from 1873, M. from 1902.
Aberdeen . . .	Prof. C. Niven, M.A., F.R.S. (for the Meteorological Office).	a.c.e	J.S.M.S. from 1907 (April), Q.W.R. 1869-1880, M. from 1888, B. from 1886.
Fort William . . .	W. T. Kilgour.	a.c.	J.S.M.S. from 1884, m. from 1890, M. from 1907.
Douglas . . .	F. Cottle (for the Borough of Douglas).	a	Transferred from Cronkbourne to Douglas in 1908, A. and B. from 1878, m. from 1884, M. from 1902.
Shrewsbury . . .	Col. H. L. Jessep, R.E.	—	A. from 1908, M. from 1904.
Cambridge . . .	R. I. Lynch, M.A. (for the Botanic Gardens Syndicate).	a	Transferred from the Observatory to the Botanic Gardens in January 1904. Daily observations in "Daily Weather Report," 1872-99. Q.W.R. 1869-80, M. 1884-99 and from 1902, m. 1899-1901, A. and B. from 1899.
Armagh . . .	J. L. E. Dreyer, Ph.D.	a.c.d.	Regular observations, but unpublished from 1833, less systematic records available since 1793. Q.W.R. 1869-80, A. and B. from 1884, m. from 1884, M. from 1902.
Dublin (Phoenix Park) .	The Superintendent (Ordnance Survey Office)	a.c.	M.S. data from 1853, A. from 1886, B. from 1881, M. from 1902.

NOTES ON THE LIST OF STATIONS.

Information for Deerness and Fort William has been supplied through the Meteorological Office, Edinburgh.

For Aberdeen and Armagh, the records of the self-recording instruments for the years 1869-80 are reproduced in the "Quarterly Weather Report." Hourly readings have been published for the years 1881-83; lithographed copies of the hourly readings were prepared for the years 1874-80.

Detailed daily observations for about thirty stations in the British Islands are published in the "Daily Weather Report" of the Meteorological Office and abridged observations for about forty other stations.

Average Values.—Reference is made in the list of stations, and also in the tables of observations, to publications of the Office containing average values for long periods, by letters a, b, etc. The explanations of these letters are as follows:—

- Appendix IV. of "The Weekly Weather Report" for 1913. Monthly averages of mean maximum, mean minimum, and mean temperature, and of rainfall for the thirty-five years 1876-1910, and (when available) of bright sunshine for the thirty years 1881-1910.
- Appendix I. to the volume of "Meteorological Observations at Stations of the Second Order" for 1891. Monthly averages for all elements for the fifteen years 1876-1890.
- "Temperature Tables of the British Islands," 1871-1900. Monthly averages of mean maximum, mean minimum, and mean temperature, generally for the thirty years 1871-1900, together with information on the extremes of temperature over the same period.
- "Rainfall Tables of the British Islands," Part I., 1866-1880; Part II., 1881-1890.
- "Hourly Values from Autographic Records," *Geophysical Section*, 1912.

Publication of Data for past years.—In the list of stations reference is given to publications containing data for past years. The following abbreviations have been used for this purpose:—

- Daily Values in "Observations at Stations of the Second Order."
- Monthly Summaries till 1907 in "Observations at Stations of the Second Order."
- Full Monthly Summaries in the "Monthly Weather Report."
- Abridged Monthly Summaries in the "Monthly Weather Report."
- Q.W.R. Monthly Summaries in the "Quarterly Weather Report, 1869-1880."
- J.S.M.S. Monthly Summaries in the "Journal of the Scottish Meteorological Society."

Hours of Observation.—Local mean time is used for the observations at fixed hours at all stations, except Aberdeen and Fort William, at which Greenwich Mean Time is observed. In the remarks column Greenwich mean time or Dublin mean time is adopted, as the case may be.

Height of the Station.—The height of the station H is that of the ground on which the rain-gauge stands. Irish Ordnance Datum is the height of low-water at Dublin, which is 7 feet below British Ordnance Datum, the Mean Sea Level at Liverpool. A correction of -7 feet has been applied to the heights of Irish stations above Irish Ordnance Datum to render them comparable with the heights of British stations. The height of the barometer H_b is the height of the cistern above Mean Sea Level. The height of the thermometers h_t is the height above the ground on which the screen stands: the height of the rain-gauge h_r is the height of the rim of the receiver above the ground in which the instrument is placed.

Barometer.—The values of pressure are given for Mean Sea Level, and the readings of the instruments have been corrected for the variation of gravity with latitude. The values are therefore in true units of pressure. They are expressed in millibars. 1 millibar = 10^3 dynes per square centimetre = 0.0295306 inches = 0.75006 millimetres.

Temperature.—The maximum and minimum thermometers are read and set at 21 h. The values are given in degrees absolute. The normal freezing point of water is 273°A. , the normal boiling point, 373°A. Temperatures at or below 273°A. are printed in small type. The equation connecting pressure p , temperature T , and density ρ is $p = k\rho T$, and the value of the constant k is 2870.88 if p is in millibars, ρ in grammes per cubic centimetre, and T in degrees absolute.

Hygrometry.—The Tables used in the computation of the vapour pressure and percentage humidity are those prepared by the late Mr Glaisher. The vapour pressure is expressed in millibars.

Wind.—At stations provided with anemometers the results are taken from the instrumental records, and the velocities are expressed in metres per second (m/s). No direction is specified if the velocity is under 2 m/s, and such winds have been counted as “calms” in preparing the summaries published in the “Monthly Weather Report.”

The factor used for translating the run of the cups into the velocity of the wind has been 2.2 since January 1906. Previous to that date the factor 3.0 was used.

At the remaining stations the observations are estimates on the Beaufort Scale, 0–12. The following table, taken from the “Observer’s Handbook,” 1913 edition, may be used for a comparison between anemometer records and estimates on the Beaufort Scale:—

Beaufort Scale.	Metres per Second.	Miles per Hour.	Beaufort Scale.	Metres per Second.	Miles per Hour.	Beaufort Scale.	Metres per Second.	Miles per Hour.
0	Less than 0.3	Less than 1	5	8.0–10.7	19–24	9	20.8–24.4	47–54
1	0.3–1.5	1–3	6	10.8–13.8	25–31	10	24.5–28.4	55–63
2	1.6–3.3	4–7	7	13.9–17.1	32–38	11	28.5–33.5	64–75
3	3.4–5.4	8–12	8	17.2–20.7	39–46	12	above 33.5	above 75
4	5.5–7.9	13–18						

The wind direction is *true*, i.e. geographical as distinguished from *magnetic*, in all cases.

Cloud and Weather.—The amount of cloud is estimated on the scale—0, sky cloudless: 10, sky completely overcast. No account is taken of the form or density

of the cloud. The weather at the time of observation is indicated by appending the appropriate weather symbol to the figure showing the amount of cloud.

Rainfall.—The amount entered to each day refers to the twenty-four hours, commencing at 9 h. on that day. The results are expressed in millimetres.

Remarks.—The following symbols which have been adopted by international agreement are used in the column headed “Remarks.”

Rain •	Mist ≡ ⁰	Gale ↗
Snow *	Hoar Frost ⊥	Solar Corona ☉
Snow lying ☒	Dew ∩	Solar Halo ⊕
Snow Drift †	Rime ∨	Lunar Corona ☾
Hail ▲	Glazed Frost ~	Lunar Halo ⊙
Soft Hail △	Thunderstorm ⚡	Rainbow (
Ice Crystals <	Thunder T	Aurora ✨
Fog ≡	Lightning <	Haze ∞

The intensities of the various phenomena are indicated by appending indices ⁰ or ² to them, thus:—

•⁰ slight rain.

•² heavy rain.

In giving the time of occurrence of a phenomenon, the “m” of the designations a.m. and p.m. is not printed. Hence—

a. stands for a.m.; p. stands for p.m.; n. is used to indicate “night.”

Figures printed in italic type are interpolations adopted in the absence of the usual data. They have been obtained by careful comparison of the returns from neighbouring stations. The extreme values of temperature, humidity and rainfall in each column are shown by the letters x and n .

THE BRITISH METEOROLOGICAL AND MAGNETIC YEAR-BOOK.

The serial statistical publications of the Meteorological Office which have been grouped together under this title are as follows—

Part I. *Weekly Weather Report*, with appendices. Issued on Friday of each week. Price 6d. per number. Annual subscription (which includes the Monthly Weather Report) 30s., postage paid.

Part II. *Monthly Weather Report*, with an annual summary. Issued as a supplement to the Weekly Weather Report on the 27th day of each month. Price 6d. per number.

Part III. (in C.G.S. Units) (1) *Daily Readings* at Stations of the First and Second Orders. Issued in monthly parts within about five weeks of the close of each month. Price 6d. each part. Annual volume, 5s.

(2) *Geophysical Journal* of the Observatories of the Meteorological Office. Issued in monthly parts, with an annual supplement. Price 1s. each part. Annual volume, 10s.

Part IV. (in C.G.S. Units) (1) *Meteorological Office Observatories. Hourly Values from Autographic Records—Meteorological Section.* Hourly Readings from the self-recording meteorological instruments at three observatories, issued in monthly parts for each observatory. Price 6d. each part. Annual volume, 20s.

(2) *Meteorological Office Observatories. Hourly Values from Autographic Records—Geophysical Section.* Issued at the end of each year. Price—1911, 5s.; 1912, 3s.; 1913, 5s.

TABLES FOR CONVERTING FROM BRITISH TO METRIC UNITS,
AND VICE VERSA.

TABLE I.—PRESSURE.

Equivalents in Millibars of Inches of Mercury at 32° F. and 45° Latitude.

For brevity, the fundamental equations may be written:—

$g_{45} = 980.617 \text{ cm/sec}^2.$

density of mercury at normal freezing-point of water = 13.5955.

1 mercury-inch = 33.8632 millibars; 1 millimetre = 1.33320 millibars.

1000 millibars = 1 bar = 29.5306 mercury-inches = 750.076 millimetres.

using 1 inch = 2.54000 cm.

Mean Barometer at Station Level.	1007.2	1007.3																			

x denotes the maximum and n the minimum value in the column.

Temperatures at or below the normal freezing-point of water are printed in small type.

Heights above Mean Sea Level:—Station, H = 48·8 m.; Barometer, H_b = 49·7 m. Heights above Ground:—Therms., h_t = 1·2 m.
Rain-gauge, h_r = 0·30 m. Lat. $58^{\circ} 56' N$. Long. $2^{\circ} 45' W$. Time, Greenwich mean time.

Heights above Mean Sea Level:—Station, $H_s = 59.8$ m.; Barometer, $H_b = 61.6$ m. Heights above Ground:—Therms., $h_t = 1.2$ m.
Rain-gauge, $h_r = 0.30$ m. Lat. $54^\circ 21' N$. Long. $6^\circ 39' W$. Time, Dublin mean time.

Mean Barometer at Station Level.	1006.7	1006.5																	

\bar{x} denotes the maximum and n the minimum value in the column.

Temperatures at or below the normal freezing-point of water are printed in small.

• denotes the maximum and n the minimum value in the column.

Temperatures at or below the normal freezing-point of water are printed in small type.
