### Forecast for Tuesday 02 Apr 2024

**Weather:** Mostly cloudy and mainly dry overnight, although some light drizzle may occur on higher slopes later in the night as cloud lowers. Any clearer spells could also allow some mist and fog to develop in valleys by morning. Low cloud and mist or fog patches slowly lifting and clearing through the morning, clearing most summits by the afternoon. Bright or sunny spells developing with a few isolated showers possible (small risk of thunder), these largely fading by the evening. Light or gentle winds throughout.

**Chance of cloud-free hill tops above 600m:** 30% becoming, 80% by the afternoon.

**Low Cloud and visibility:** Rather extensive cloud developing overnight, bases 300-500m, lowest and most widespread on south and west facing slopes. Some northern and eastern areas remaining largely clear. Patches of mist and valley fog possible where clearer skies persist until mid-morning. Cloud lifting generally clear of tops by late morning or early afternoon, with patches perhaps briefly affecting hills around 600m in association with any afternoon showers.
